

Animation Contributes to \$5.95M Settlement

When a truck plowed a car off the highway causing it to roll over and result in life-altering injuries for the victim, Tauber Law Offices thought – how do we show how horrific this accident was to the clients sitting in the car. They wanted graphics that would “shock and awe” the viewer for both mediation and trial. And it had to be scientifically accurate.

The Tauber firm contacted High Impact and its team of forensic artists and technicians to help. High Impact rendered 3D models of the two vehicles and recreated the physics of the incident to deliver an animation that captures the scene from multiple angles - including a first-person perspective of the driver in the vehicle that rolled over. The artists also compiled custom illustrations and animations into an interactive Digital Injury Summary exhibit that conveyed the totality of the victim’s life-altering injuries.

“The owner of the trucking company and the insurance adjuster were both blown away when we played the animations for them in mediation,” said plaintiff attorney Jared Tauber. “Furthermore, my client’s spine surgeon was speechless when we showed the reenactment of his surgery.”

The result – a \$5.95 million settlement for the case.

High Impact’s team of medical experts, artists and developers can build and customize your presentation for any case involving [animated accident reconstruction](#), [personal injury](#), [medical malpractice](#), [birth trauma](#), [product liability](#) - or any subject involving complex information.
